

Fluid-o-Tech magnet drive gear pumps MGC4-MGC11 DC pump/motor units

The "MG 200" Series magnet drive gear pumps are compact precision performance pumps for high technology applications.

The magnet drive principle provides a totally sealed pump chamber which

is capable of handling a wide range of corrosive liquids with a high degree of safety. The pump housing is available in AISI 316L, Duplex or AISI 303 stainless steel the Gears are available in PTFE, Ryton® or Peek™.

In operation the MG 200 Series pumps are noiseless, pulsation-free and capable of handling relatively high temperature liquids i.e. 120°C (248°F) with a low coefficient of expansion.

The principle of the magnetic drive comprises an inner magnet embodied in the pump and connected to the driving gear, and an outer magnet connected to the motor shaft. The pole-to-pole alignment of the two magnets provides the driving motion to the pump. Decoupling will occur when the pump load exceeds the coupling torque between the magnets.

- 1/8" female threaded intake/outlet
- Relief valve available upon request

MGC4-MGC11

Main Applications

- Medical and surgical equipment
- Hemodialysis apparatus
- Seal flush
- Laser apparatus
- Lubrication
- "Ink-jet" printing systems
- Cooling systems
- Laboratory instrumentation
- Water purification and ultra-filtration
- Sampling
- Food processing equipment
