

ABBREVIATIONS: BR = Bronze, PL = Polysulfone Plastic, SS = Stainless Steel, C = Center Inlet.

DESCRIPTION: The March 809-HS & 815 Series hot water booster centrifugal magnetic drive pumps are built to handle liquid transfer in heating and cooling operations. Contact the factory for application assistance.

OPERATION: These pumps are not self-priming, lack a suction lift, and thus require a flooded suction. These pumps cannot be run dry.

INSTALLATION: The 809-HS & 815 Series pumps should be installed with the pump housing arrow pointing in the direction of flow within the system. If the arrow indicating flow is not in the direction required, remove the housing screws (Item 1 or 2) holding the housing to the motor bracket and rotate the housing assembly as required. Replace the screws and tighten. The pump is composed of a wet end assembly which can be separated by unscrewing the screws (Item 1 or 2). The pump will then separate into 2 parts. The liquid will be contained within the wet end assembly unless the screws (Item 17 or 18) on the rear housing are loosened.

	NOTE: Contact Factory for other materials and/or parts not listed. *Not Shown Legend: S = Standard, O = Optional														

NOTES: All specifications & data are based on pumping water & are intended as a guideline only. Specifications may vary with different motors.

LUBRICATION: The motor should be oiled annually at the start of the heating season with 4 or 5 drops of SAE 20 weight non-detergent oil in each bearing. If the pump is used year round it should be oiled every six months. Do not over oil.

GENERAL SAFETY INFORMATION: Follow all local electrical and safety codes, and the Occupational Safety and Health Act (OSHA). Make certain that the power source conforms to the requirements of your equipment. Always disconnect power source before performing any work on or near the electric motor. Caution must be exercised to relieve any pressure in the system and in draining hot water from the pump or the system. March cannot recommend the 809 Series out of bronze where the liquid is used for human consumption per California Law due to the presence of lead.

*UL Recognition on pumps, file E80954, is for water only. Motors are U.L. Yellow Card listed, impedance protected or thermal overload Protected. Complete pump under U.L. file E80954.

DISASSEMBLY AND REASSEMBLY: The motor can be removed from the wet end assembly without draining the liquid from the system. To do so remove four screws (Item 1 or 2) and slide the motor assembly away. If parts inside the wet end assembly must be removed, isolate the pump or drain the system. When the system is drained and cool, remove the four screws (Item 17 or 18) from the rear of the housing. The rear housing can now be removed. Remaining pump parts can be removed. Replace any worn or damaged parts. Replace the "O" ring anytime the rear housing is removed.

LIMITED WARRANTY: March pumps are guaranteed only against defects in workmanship or materials for a period of one year from date of manufacture pumping water. For the complete warranty and to register online go to www.marchpump.com/warranty-registration
